Additionally, each bar is broken down by opioid related or not opioid related responses.

## Top 5 Primary Impression Categories

# Mathews County EMS Assessment (All Substances)

These visualizations provide a general overview of the number of EMS responses for **Mathews County** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories. Additionally, each bar is broken down by opioid related or not opioid related responses.

## Top 5 Primary Impression Categories

# York County EMS Assessment (All Substances)

These visualizations provide a general overview of the number of EMS responses for *York County* dating back to *June 2023*. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories. Additionally, each bar is broken down by opioid related or not opioid related responses.

## Top 5 Primary Impression Categories

# City of Poquoson EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **City of Poquoson** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

## Top 5 Primary Impression Categories

The chart is not displayed because it contains only undefined values.

# City of Williamsburg EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **City of Williamsburg** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

## Top 5 Primary Impression Categories

The chart is not displayed because it contains only undefined values.

# Gloucester County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **Gloucester County** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

## Top 5 Primary Impression Categories

# James City County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **James City County** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

These visualizations provide a general overview of the number of EMS responses for **York County** dating back to **June 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

## Top 5 Primary Impression Categories

# VDH Health Districts (All Substances)

The chart below displays the total number of EMS responses by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most responses regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement dating back to **June 2023**. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

## VDH Health District EMS Responses Relative to Per Capita Populations

# VDH Health Districts (Opioids)

The chart below displays the total number of EMS responses by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most responses regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement dating back to **June 2023**. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

## VDH Health District EMS Responses Relative to Per Capita Populations

# VDH Health Districts (All Substances)

These charts display the percent change in EMS responses over the past month and year, allowing for easy identification of regions that have seen a significant increase in responses recently. The Month-to-Date Change in EMS Responses focuses on the change in EMS responses over the past month. Similarly, the Year-to-Date Change in EMS Responses displays the change in responses for each region, but it shows the change over the past year rather than the change over the past month. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement from the current and previous year. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported..

Month-to-Date Change in EMS Responses

Year-to-Date Change in EMS Responses

\*Aggregations using 5 or less entries will be masked and removed from visualizations.

# Locality

## VDEM Region: 5

The table below provides an overview of the localities in **VDEM Region 5** as the locality or localities of focus dating back to **June 2023**. This is meant to allow for comparison to see how different localities in the same region are handling substance overdoses. The data used to create this chart contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

| Locality               | Q | VDH Health District | Q | Most Common Substance | Change from Previous Month (All Substances) | Change from Previous Year (All Substances) | Responses (All Substances) | Change from Previous Month (Opioids) | Change from Previous Year (Opioids) | Responses (Opioids) |
|------------------------|---|---------------------|---|-----------------------|---------------------------------------------|--------------------------------------------|----------------------------|--------------------------------------|-------------------------------------|---------------------|

| <b>Dataset</b>                 | Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement                             |
| <b>Source</b>                  | VDH – Emergency Medical Services                                                                                                                                 |
| <b>Date Range</b>              | 6/1/2023 - 6/27/2025                                                                                                                                             |
| <b>Details</b>                 | Data includes aggregated details on substance use incident responses. Displayed data are counts of events that match the filtered selections                     |
| <b>Geographic Granularity</b>  | Presented data shows the number of EMS incident responses for a Locality or FIPS code but does not show where an incident response occurred within the locality. |
| <b>Demographic Granularity</b> | Presented data shows the number of responses for individuals who meet the demographic selections but does not show records for any specific individual.          |
| <b>Time Granularity</b>        | Presented data has been grouped into the year-month for when an EMS response occurred.                                                                           |
