VDH Health Districts (All Substances)

The chart below displays the total number of EMS responses by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most responses regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement dating back to ***March 2022***. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

VDH Health Districts (All Substances)

These charts display the percent change in EMS responses over the past month and year, allowing for easy identification of regions that have seen a significant increase in responses recently. The Month-to-Date Change in EMS Responses focuses on the change in EMS responses over the past month. Similarly, the Year-to-Date Change in EMS Responses displays the change in responses for each region, but it shows the change over the past year rather than the change over the past month. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement from the current and previous year. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported..

Locality

VDEM Region: 5

The table below provides an overview of the localities in ***VDEM Region 5*** as the locality or localities of focus dating back to ***March 2022***. This is meant to allow for comparison to see how different localities in the same region are handling substance overdoses. The data used to create this chart contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

Locality	VDH Health District	Most Common Substance	Change from Previous Month (All Substances)	Change from Previous Year (All Substances)	Responses (All Substances)	Change from Previous Month (Opioids)	Change from Previous Year (Opioids)	Responses (Opioids)
City of Portsmouth	Portsmouth	Unspecified	26	-39	2,399	19	-24	1,419
Richmond County	Three Rivers	Other Psychoactive	3	1	33	2	2	6

Data Citation	
Dataset	Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement
Source	VDH – Emergency Medical Services
Date Range	3/1/2022 - 3/29/2024
Details	Data includes aggregated details on substance use incident responses. Displayed data are counts of events that match the filtered selections
Geographic Granularity	Presented data shows the number of EMS incident responses for a Locality or FIPS code but does not show where an incident response occurred within the locality.
Demographic Granularity	Presented data shows the number of responses for individuals who meet the demographic selections but does not show records for any specific individual.
Time Granularity	Presented data has been grouped into the year-month for when an EMS response occurred.
