Over-the-Counter Drugs
A Guide for Parents

Over-the-Counter (OTC) Drugs are drugs that are easily accessible and purchased without a prescription, such as cold and cough medicines (Coricidin, Triaminic, Tylenol), aspirin (Ibuprofen, Motrin, Tylenol), and motion sickness pills (Dramamine).

OTC drugs are dangerous, addicting and life damaging. Misuse of these drugs can cause euphoria (feeling drunk or high), hallucinations, irregular heartbeats, impaired judgement and motor coordination. Always examine medication labels for proper use, dosage, potential side effects and warnings. Fatal overdosing can occur.

**How to prevent misuse of OTC medications:**
- Do not stockpile medications.
- Store them out of reach and sight from children.
- Secure them in lockboxes or locked drawers.
- Disposed of unused medications properly.
